

Panthronics

Want to do some *real engineering again?*

We are looking for:

Experienced Near Field Communication (NFC) Software Architect (f/m)

To define and develop software for RFID/NFC, Mobiles, Wearables, and IoT-Applications

Tasks and responsibilities:

- Understand RFID/NFC architecture requirements in mobile devices
- Find optimum split between hardware and software
- Translate customer requirements to device specifications
- Develop firmware and APIs; specify interface to the application device
- High level architectural modeling of the RFID/NFC device inside the application device
- Strong interaction with off-site design teams; perform software reviews

Profile:

- Degree in the field of electronic engineering, computers science or equivalent
- Very familiar with RFID/NFC applications
- At least 5 years' experience system/software engineer in the area of NFC or RFID
- Good knowledge of state-of-the-art software development tools
- Experience with hardware-in-the-loop evaluation
- Fluent in English - German skills are a plus
